

ABSTRACT OF THE DISCLOSURE

A bird feeder wherein a hopper is carried by a housing, such as a wire cage, with a hanger attaching the housing to a support for the bird feeder, the hopper being removably secured to the base of the housing so that the base and hopper assembly can be separated from the remainder of the housing to refill and/or clean the hopper without removing the hanger from its support. The hopper can be separated from the base, as well, to facilitate cleaning.
